Comments page 4

Allow user to enter their name and comments, the comments are update to the database

Modified exercise 4

There is a form, and a submit button with the process page with javascript validation.

save the survey result to database

Extra

1. Single entry page to site, index.php

2. Page data stored in database

3. CSS animation is displays on the about page and must do page, text slideshow

4. audio display on about page and image gallery page

5. Use photoshop to resize all the images, and create html and css validation icon on every single page

Good Design Techniques

Using two contrast colors, one of the contrast colors that use is black and white for the majority of the color scheme.

Another contrast color that is used is red and blue, red and blue are used to add details. All images have alt and title attributes.

The majority of the image contains background around, to make it stand out, and to look more organized.

Using all PHP and database

All page are using php, and stored in the database

Many Media Queries

All websites are mobile-friendly, able to display at any screen, such as phone, desktop, iPad, etc.

Organization of information

All the text and graphics make sense, there is the text next to images used to describe the image. And CSS floats are property used for the images.

Content

The majority of the content is interesting to read, and it is very useful for travel guides. Majority of the text is short, easy to read

Navigation

All navigation is using contrast color, with a hover color of blue, which is easy to read and discover.

Easy to get around, intuitive, and all the pages are labeled. Besides, there is sticky navigation on many sites. Allow users to be able to go to the next page even when they scroll down the pages.

Use of HTML and CSS3

There is a valid HTML 5 and Valid CSS3 in every page, use for validation

Reference

Using HTML page to site the reference that used, with some picture next to it

Site all the possible resource

Footer

There is a footer on every single page, with an HTML 5 icon that links to www.validator.w3.org and valid HTML 5 code. There is a border separating the footer from the body. The footer using php code to display the current date

original graphics

Using photoshop to create two icon, html validation icon and css validation icon
